USER GUIDE

EE8915 – CO₂ Sensor for Railway Applications

SCOPE OF SUPPLY

- EE8915 sensor according ordering guide
- Test report according to DIN EN10204 2.2
- Quick guide
- Rubber gasket (only for duct mount)

CAUTION

The device shall not be exposed to extreme mechanical or thermal stress.

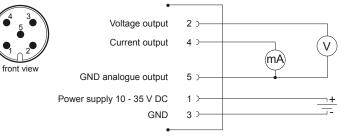

The EE8915 is not appropriate for safety, emergency stop or other critical applications where device malfunction or failure could cause injury to humans and other living beings.

CONNECTION DIAGRAM

FIX INSTALLED CABLE

Core number	Function
1	10 – 35 V DC supply
2	GND supply
3	GND analogue output
4	Current output
5	Voltage output

M12 CONNECTOR

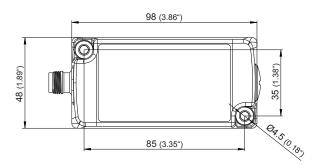

Very important: For failure-free operation and performance according to the specs, the GND supply and the GND analogue output must be wired separately.

Analogue outputs factory settings according ordering guide (see datasheet at www.epluse.com/EE8915):

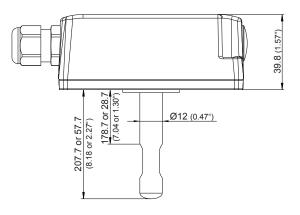

Order code	Voltage output	Current output
GA2	0-5 V	4-20 mA
GA3	0-10 V	4-20 mA
GB5	0-10 V	0-20 mA
GB6	0-10 V	4-20 mA

DIMENSIONS

WALL MOUNT

DUCT MOUNT

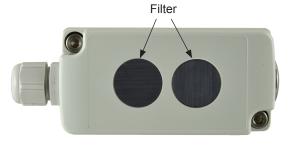

INSTALLATION

WALL MOUNT

Choose a location which minimizes the dust deposits on the filter.

DUCT MOUNT

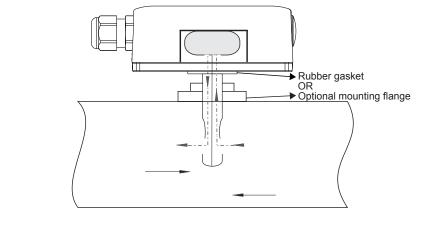

When correctly installed, a small amount of air will flow through the divided probe into the EE8915 enclosure, where the CO_2 sensing cell is located, and back into the duct.

Very important

For accurate measurement and response time according to specification:

- Minimum air speed in the duct shall be 1 m/s (196 ft/m).
- The air flow shall be perpendicular to the opening holes on the head of probe.

SETUP AND ADJUSTMENT

The EE8915 is ready to use and does not require any configuration by the user. The factory setup of EE8915 corresponds to the type number ordered. For ordering guide please see data sheet at www.epluse.com/EE8915.

If needed, the user can change the factory setup by using the USB service interface and the EE-PCS, Product Configuration Software, free download at www.epluse.com/configurator.

One can change the $\dot{CO_2}$ output signal, the scaling of the outputs and perform $\dot{CO_2}$ adjustment.

It is possible to enable or disable the pressure compensation (factory setting: enabled) and the NAMUR error indication (factory setting: disabled).

The USB port (type Micro-B, smartphone standard) is located behind the access cover.

During setup or adjustment via USB service interface, the EE8915 requires external power supply.

EE-PCS PRODUCT CONFIGURATION SOFTWARE

- 1. Download the EE-PCS Product Configuration Software from www.epluse.com/configurator and install it on the PC.
- 2. Connect the E+E device to an USB port of the PC.
- 3. Start the EE-PCS software.
- 4. Follow the instructions on the EE-PCS opening page for scanning the ports and identifying the connected device.
- 5. Click on the desired setup or adjustment mode from the main EE-PCS menu on the left and follow the online instructions.

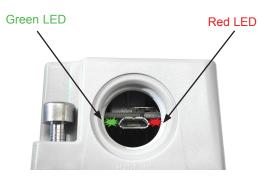

ERROR INDICATION ON THE ANALOGUE OUTPUT

The EE8915 features an error indication on the analogue output according to NAMUR recommendations (factory setting: disabled). The feature can be enabled with the EE-PCS Product Configuration Software, see above.

Output signal	NAMUR signal level
0-5 V	5.25 V
0-10 V	10.5 V
4-20 mA	20.8 mA
0-20 mA	21 mA

STATUS LEDs

The status LEDs are located behind the access cover.

Green LED flashing = Normal operation

Red LED

off

on flashing

= Normal operation

= Failure. Contact E+E after sales service.

= Failure. Also indicated on the analogue output (NAMUR indication enabled). The failure might be temporary, caused for instance by overheating. If the flashing persists, contact E+E after sales service.

MAINTENANCE

Longer response time of the wall mount EE8915 is caused by duct deposits on the filter. Clean the filter by sweeping it gently with a soft, dry cloth!

Measurands

dual wavelength non-dispersive infrared technology (NDIR)	
02000 / 5000 / 10000 ppm	
02000 ppm: < ± (50 ppm +2% of mv)	
05000 ppm: < ± (50 ppm +3% of mv)	
010000 ppm: < ± (100 ppm +5% of mv) mv=measured value	
duct: < 100 s at 3 m/s (590 ft/min) air speed	
wall: < 160 s	
± (1 + CO ₂ concentration [ppm] / 1000) ppm/°C, for -20+45 °C (-4+113 °F)	
0.014% of mv / mbar (ref. to 1013 mbar)	
approx. 15 s	
0-5 V / 0-10 V -1 mA < I _L < 1 mA	
0-20 mA / 4-20 mA R _L < 500 Ohm	
10-35 V DC	
average: 10 mA + output current	
peak: 105 mA for 0.3 s	
1 m/s (196 ft/min)	
polycarbonate, UL94V-0 approved	
IP65 / NEMA 4	
USB, Micro B	
connector M12x1 or cable with flying leads, max. 3 m (9.85 ft)	
railway standard: EN50121-3-2:2006 EN50121-1:2006	
C EN61326-1 EN61326-2-3 Industrial Environment	
C FCC Part 15 ICES-003 ClassB	
-40+60 °C (-40+140 °F) 095 % RH (non-condensing)	

1) The pressure dependency of a non-compensated \mbox{CO}_2 sensor is 0.14% of mv / mbar

USA FCC notice:

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the installation manual, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which thereceiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.
