

## EE8915

## CO<sub>2</sub> Sensor for Railway Applications

EE8915 measures reliably CO<sub>2</sub> concentration in harsh environment and complies with the relevant railway standards.

### Outstanding Accuracy

A multiple point CO<sub>2</sub> and temperature (T) adjustment procedure leads to excellent CO<sub>2</sub> measurement accuracy over the entire T working range -40...+60 °C (-40...+140 °F).

### Long Term Stability

The E+E dual wavelength non-dispersive infrared (NDIR) measurement principle compensates automatically for ageing effects and is highly insensitive to pollution.

### Pressure and Temperature Compensation

The active compensation with on-board sensors leads to best CO<sub>2</sub> measurement accuracy independent of temperature, altitude or weather conditions.

### Versatility

EE8915 is available for wall and duct mounting. The innovative design enables the combination of short response time and high protection class. The CO<sub>2</sub> measured data is available as voltage and current output signals.

### Suitable for Demanding Applications

Due to the compliance with tough railway standards, the EE8915 stands for excellent performance even under challenging conditions in any process and climate control application.

### User Configurable and Adjustable

The free EE-PCS Product Configuration Software facilitates the configuration and adjustment of the EE8915.
